WIPER DELAY

+44(0) 1885 488 488

Smartscreen is a variable intermittent windscreen wiper controller that can set a variable wipe delay of between three and thirty seconds, without the need for additional switches or knobs. By using the vehicle's existing wiper control switch or stalk the unit may be programmed with the desired delay. The normal speed and second speed wiper functions are not affected. Smartscreen is simple to fit and comes with step by step instructions. Normally DIY fitting takes half an hour. Smartscreen is hidden from view so you do not change the appearance of your interior.
